

## EMERGENCY MONITORING UNIT

The miALERT<sup>A200</sup> is an affordable emergency communication solution that does not compromise on features or functionality.

miALERT<sup>A200</sup> benefits both the resident and the facility

Instant two-way voice communication for immediate emergency assessment and response.

Wireless transmitters activate the miALERT<sup>A200</sup> from anywhere within the resident's apartment.

Simple to program, reconfigure and add additional remote transmitters as required.

Unprecedented ease of installation and programming – connecting to your existing power and analog telephone cabling.

Add-on capability for up to eight wireless devices per miALERT<sup>A200</sup> unit.

Integration modules for wired sensors including smoke detectors, flood detectors, door contacts, temperature sensors, carbon monoxide detectors, toilet sensors and check-in devices.

Alternative notification options tailored to meet your instant two way communication requirements: miFIVE, miCALL Center and miHOSTED call streams.

A low cost scalable nurse call solution offering exceptional value and functionality for facilities of all makes and models.

# miSOLUTION

The miALERT<sup>A200</sup> is integrated into the facility's telephone system. The miALERT<sup>A200</sup> only requires an analog telephone outlet and A/C power source in each area.

The system is activated when residents press their personal pendant button or other wireless component.

Connectivity to mobile telephones can allow response personnel to handle emergencies from anywhere.

## The miALERT operates in three modes

### 1. miFIVE Mode

miALERT<sup>A200</sup> will call five numbers in sequence once triggered—numbers are customizable. The miALERT<sup>A200</sup> will continue to call the list until it receives a live response.

### 2. MiHOSTED Mode

miALERT<sup>A200</sup> contacts our central server during an emergency. Server notifies and escalates based on pre-determined call flow information. Information is recorded for reporting. Notification is sent to a landline, mobile device, email, TTS, SMS and remote desktop alert notification utilities.

### 3. MiCALL Center Mode

miALERT<sup>A200</sup> contacts our call centre where an emergency or personal contact is notified or dispatched.
